

Contents

I	Financial calculus	1
1	Common financial laws	3
1.1	Basic vocabulary	3
1.2	Simple Interest and Simple Discount	6
1.2.1	Change of time measure: equivalent rates	8
1.2.2	Floating interest rates	8
1.2.3	Some remarks on zero coupon bonds	9
1.2.4	Computing the future value of annuities	12
1.3	Compound accumulation and compound discount	13
1.3.1	The meaning of compound accumulation: “compounding” the interest.	13
1.3.2	Floating interest rates	14
1.3.3	Changing the unit measure of time: equivalent rates	14
1.3.4	Simplifying the computations for annuities	16
1.4	Accumulation with advanced simple interest and linear (bank) discount	19
1.4.1	Floating discount rates	20
1.4.2	Simplified computations for annuities	21
1.5	Comparison between financial laws described with different formulas	21
2	Financial laws depending on one variable	23
2.1	Various generality levels	23
2.2	Characteristic parameters	24
2.3	Decomposability	28
3	Financial laws depending on two variables	29

3.1	Various generality levels	29
3.2	Characteristic parameters	30
3.3	Decomposability	32
3.3.1	Life-insurance accumulation	35
3.3.2	Evaluating the future value in real terms	36
4	Interest rate term structure	37
5	Amortization (redemption) of a loan	47
5.1	Generalities	47
5.1.1	Gradual amortization	47
5.2	The most popular amortization plans	52
5.2.1	Constant amortization quotas	53
5.2.2	Constant instalments	53
5.2.3	Other types of amortization plans	56
6	Examples and applications	59
II	Financial choices	69
7	Financial objectives	71
7.1	What is a financial objective?	71
7.2	Economic and financial environment	72
7.3	Onerous and parsimonious methods	72
8	Net Present Value	75
8.1	The basic scheme	75
8.2	Generalized Net Present Value	81
9	APV and GAPV	85
9.1	First notions	85
9.2	Financial leverage	87
10	Immunization and Duration	93
10.1	Remarks on the use of the model: portfolio duration	96
10.2	Another use of <i>duration</i> : the price volatility of a security	99
10.3	Price sensitivity of securities with respect to a possibly non-flat term structure	101
10.4	Sensitivity Analysis and Duration	102
11	NPV and ROE	105
11.1	Decomposition of global indices	105
11.1.1	The case of debt capital	109
11.1.2	Evaluation of fiscal effects	111
12	Simulation Models	115
12.1	General ideas	115
12.2	The TRM model	116

12.3 Multiple objectives	118
13 Incoherent methods: a short review	121
13.1 Recovery time	121
13.2 Return on Equity	122
13.3 Internal (or Implicit) Rate of Return	122
14 Some complements	127
14.1 How to manage uncertainty	127
14.1.1 Hard approach	127
14.1.2 Soft approach	128
14.2 “Legal” profitability or cost indicators	128
14.2.1 General aspects	128
14.2.2 Some weaknesses	128
14.2.3 Objectives or constraints?	129
14.3 Other objectives	130
15 Appendix	131
 III Financial applications	 135
16 Leasing and consumer credit	137
16.1 Contract construction	137
16.2 The profitability of leasing contracts	139
16.2.1 Flexible contracts	144
16.3 Average profitability of contract portfolios	144
16.4 Consumer credit	145
16.4.1 How to construct an instalment sale contract	145
16.4.2 The question of the amortization plan	147
16.4.3 The TAEG	150
17 Bonds	153
 IV Exercises and problems	 161
18 Exercises with elaborated solutions	163
19 Exercises to be elaborated	189
19.1 Financial laws	190
19.2 Discounted Cash Flow and implicit interest rate	197
19.3 Amortizations, leasing and instalment sales	199
19.4 Interest rate term structure	202
19.5 Financial choices	203
 References	 205
Index	209
